Summary

Software engineer with 3+ years in enterprise backend engineering, PKI infrastructure, and certificate lifecycle management. I build and ship production-grade Java and Spring Boot systems — and when they break in production, I own the fix. As a SWAT Engineer, I am the primary escalation point for P1/P2 incidents: delivering immediate workarounds and database interventions and scripting, then driving permanent product-level resolution, all while managing a continuous pipeline of backend development and feature enhancements. I work directly with enterprise customers, communicate clearly under pressure, and have a consistent record of on-time delivery. On the side, I actively build in AI and ML — bridging backend engineering with where enterprise software is heading.

Core Competencies

- **Backend:** Java 21, Spring Boot, REST APIs, Python, PowerShell, JavaScript
- **PKI & Security:** Certificate Lifecycle Management, Digital Certificates, PKI, CA Integration
- **AI/ML:** TensorFlow, Scikit-learn, CNN Architectures, Deep Learning, Data Preprocessing & Augmentation
- **Data & Messaging:** MongoDB, Data Pipelines, Query Optimisation
- **DevOps & Cloud:** Docker, Kubernetes, GitHub, Git, AWS (Fundamentals)

Professional Experience

AppViewX, Inc.

08/2023 – Present | Chennai, India

Software Development Engineer - II

- **SWAT Engineer — Incident Ownership:** Primary escalation point for P1/P2 incidents across enterprise clients in banking, healthcare, government, and Fortune 500 industries. Handle 10+ critical incidents monthly, delivering immediate workarounds within hours of escalation, then driving permanent product fixes — maintaining a high customer satisfaction rate and preventing churn across high-revenue accounts.
- **REST API & Feature Development:** Engineered 20+ secure REST APIs and 40+ custom feature enhancements across AppViewX's PKI and certificate lifecycle management modules, covering automation workflows, inventory integrations, CA implementation and stabilisation, and device onboarding. Maintained 100% on-time delivery across all client-committed deliverables, contributing directly to increased client retention and renewal rates.
- **PKI Infrastructure Optimisation:** Delivered improvements across certificate discovery, CA implementations, and inventory integrations — cutting discovery time, reducing manual intervention, and enabling reliable device onboarding for dozens of enterprise customers across regulated industries.
- **AI-Augmented Engineering:** Integrated GitHub Copilot and Claude into daily workflows to automate test coverage generation, time logging, and log triage — reducing manual overhead by an estimated 30% and accelerating average ticket resolution time.
- **Cross-Team Collaboration:** Consistently recognised for ownership and analytical rigour under pressure; collaborate across support, product, and engineering to unblock enterprise customers, often serving as the bridge between customer escalation and engineering resolution.

Spartificial

05/2024 – 09/2024 | Remote

ML Research Intern

- Developed a **CNN-based deep learning model** for LIGO gravitational wave glitch classification, achieving **92% accuracy** across 8 distinct glitch categories.
- Built preprocessing pipelines for **12,000+ spectrogram images** with normalisation and augmentation techniques, improving training efficiency by **20%**; reduced false positive rates by **25%** through 5-fold cross-validation and hyperparameter tuning.

AppViewX, Inc.

01/2023 – 07/2023 | Chennai, India

Software Development Engineer — R&D Intern

- Gained structured expertise in PKI infrastructure, certificate lifecycle management, and CA security protocols. Contributed to Java/Spring Boot feature development — directly preparing for the full-time engineering role.
- Contributed to the initial prototype of SIGN+, a new product for secure artifact signing, as part of a 4-person engineering team — implementing the JAR signer process and integrating it into the product's secure artifact signing pipeline.

Education

M.Tech — Artificial Intelligence & Machine Learning

01/2026 – Present

Birla Institute of Technology and Science (BITS Pilani) — Work-Integrated Learning Programme

B.E — Mechanical Engineering

06/2019 – 05/2023

Coimbatore Institute of Technology, Coimbatore, India [GPA — 9.23/10]

Project Highlights

Gravity Spy Glitch Classification | github.com/Sarvesh-Ramani

CNN-based deep learning model for LIGO gravitational wave anomaly classification — 92% accuracy across 8 glitch categories with a 25% reduction in false positives. Built in TensorFlow/Keras with preprocessing pipelines for 12,000+ spectrogram images.

Cert V2X | Internal Hackathon (40+ Teams)

Backend PKI service for Vehicle-to-Everything (V2X) certificate issuance and management — MQTT-integrated for real-time vehicle-to-CA communication with IEEE 1609.2-compliant authentication. Recognised among 40+ teams for concept novelty and implementation quality.

Awards

Certificate of Excellence 2025–26 — AppViewX, Inc.

02/2026

Awarded for consistent performance and impactful contributions across the engineering team.

SPOT Award — AppViewX, Inc.

06/2024

Quarterly recognition for consistently resolving enterprise customer issues with high ownership and on-time delivery.

Certificate of Excellence 2023–24 — AppViewX, Inc.

07/2024

Recognised for SWAT team performance, continuous delivery excellence, and mentoring of newly onboarded interns.

Certifications

- AI Engineer Accelerator Program — Outskill (Sep 2025)
- Introducing Generative AI with AWS — Udacity (Jun 2025)
- AWS Educate — Machine Learning Foundations
- Python Data Structures
